

FOR IMMEDIATE RELEASE

Halco Lighting Technologies® Introduces New HID Retrofit 20 Watt LED Lamp

Norcross, GA. December 17, 2015 – Halco Lighting Technologies introduces the newest addition to its HID Retrofit Series of LED lamps. The new 20 watt lamp joins the current HID retrofit product line that features 36 watt, 45 watt, and 54 watt versions. The new 2100 lumen, 20 watt lamp is designed to replace 70 watt high pressure sodium (HPS) lamps and can provide energy and maintenance savings of more than 70% compared to HPS systems.

“Halco is proud to be a part of the energy-saving retrofit efforts going on throughout America’s cities and towns,” says Rob Freitag, director, product development and marketing for Halco. “Replacing antiquated lighting systems in decorative Post Top luminaires not only saves energy, but is also helping to revitalize commercial and retail areas in cities and towns across America; we’re proud to be able to provide reliable LED technology that helps make that possible.”

Like the other HID Retrofit lamps in the family, the 20 watt lamp has a color temperature of 5000K with a CRI of 82. The lamp is UL listed and has a 50,000 hour rated life. This easy to install LED lamp is a great solution for post top and high bay fixtures where sockets are in a base up or base down orientation.

The Halco new HID Retrofit Series 20 watt lamp is a great addition to the HID Retrofit LED lamp family that can be used for those fixtures that need a quality, long-lasting solution for lower lumen applications. Designed for indoor or outdoor use, each lamp is UL Listed for damp locations and rated for use in enclosed luminaires. As always, it features the Halco Lighting 5-year limited warranty.
