

**FOR IMMEDIATE RELEASE**

**Halco Lighting Technologies® Introduces New JC2 Lamps**

**Norcross, GA. (October 19, 2015)** – Halco Lighting Technologies introduces the newest addition to their JC series with two JC2 LED lamps. These G4 base lamps are just 1.57 inches high and .70 inches wide. They are designed for the landscape market to power pathway lighting and other luminaires. The new JC2 lamps are a high output JC version lamp that provides an omnidirectional distribution and is IP65 rated for long-lasting durability for outdoor use. The 2.3 watt LED lamps are replacements for 20 watt halogen lamps and can help save on energy and maintenance of up to 89% compared to halogen.

“The typical JC LED lamps available before today focused on energy reduction, but not on quality of light,” states David Nelkin, vice president, product and supply chain operations at Halco, “but these lamps change the game. Now landscape designers can provide a low energy, long-lasting solution that provides beautiful light distribution as well.”

Light more for less. Not only are the JC2 lamps low wattage, they also create a more uniform beam spread than other LEDs on the market. This ensures that less energy is used and no light goes to waste. With a 10-15 volt range, these lamps will not require any additional power on existing lighting fixtures or require a large transformer for new projects.

Both JC2 lamps are 250 lumens and have a CRI of 82. The JC2/827/LED2 lamp has a color temperature of 2700K while the JC20/2WW/LED2 provides a color temperature of 3000K. These easy to install LED lamps have a 40,000 hour rated life and are great solution for replacing typical Halogen lamps.

Each lamp has a 5-year limited warranty, but that warranty extends to 20-years when installed within Sollos® Landscape Lighting Luminaires.
